

# EJERCICIO DE PROGRAMACIÓN ORIENTADA A OBJETOS

leandro clavijo

## EJERCICIO 1

```
package pkg1.proyecto_poo;
```

```
import java.util.Scanner;
```

```
public class Proyecto_POO {
```

```
    public static void main(String[] args) {
```

```
        ClaseA a = new ClaseA();
```

```
        ClaseA b = new ClaseA(20);
```

```
        ClaseA c = new ClaseA(20, 40);
```

```
        System.out.println("La clase contiene: "+a.getValorPrimari()+" ,  
"+a.getValorSecundari());
```

```
        System.out.println("La clase contiene: "+b.getValorPrimari()+" ,  
"+a.getValorSecundari());
```

```
        System.out.println("La clase contiene: "+c.getValorPrimari()+" ,  
"+c.getValorSecundari());
```

```
    }
```

```
}
```

```
package pkg1.proyecto_poo;
```

```
public class ClaseA {
```

```
    //Atributos
```

```
    private int ValorPrimari ;
```

```
